

Meet the Speaker

Chris Behr

Chris is an economist with a background in engineering and finance and 30 years of consulting experience. Over the past 20 years at HDR, he has worked on projects across all types of infrastructure and developed and applied a wide variety of analytical approaches. He currently leads HDR's economics practice in the water sector while continuing to work on transportation projects. Chris remains a technical lead for HDR's work on the economics of active transportation initiatives.

Recently, he developed methods to implement a new form of economic analysis that accounts for the distributional value of benefits and costs to beneficiaries, relative to their incomes. Application of that type of analysis has been applied on transit, highway, and flood risk mitigation projects.
