#### WORKING

TOGETHER

TO PLAN

FOR THE

FUTURE

# **Conformity Demonstration of the FY2014-2018 Regional Transportation Improvement Program**

Report No. 07-2013 Adopted by the COMPASS Board on September 16, 2013 Resolution No. 18-2013 THIS DOCUMENT IS SUBMITTED TO THE U.S. DEPARTMENT OF TRANSPORTATION IN FULFILLMENT OF THE REQUIREMENTS OF THE 1990 CLEAN AIR ACT AMENDMENTS, THE FEDERAL TRANSPORTATION AIR QUALITY CONFORMITY RULES (40CFR93), AND THE STATE OF IDAHO ADMINISTRATIVE CODE ON TRANSPORTATION CONFORMITY (IDAPA 58-01.01.563-574).

#### **RESOLUTION NO. 18-2013**

#### FOR THE PURPOSE OF APPROVING THE FY2014-2018 REGIONAL TRANSPORTATION IMPROVEMENT PROGRAM AND ASSOCIATED AIR QUALITY CONFORMITY DEMONSTRATION

**WHEREAS,** the Community Planning Association of Southwest Idaho has been designated by the Governor of Idaho as the Metropolitan Planning Organization responsible for transportation planning in Ada and Canyon Counties;

**WHEREAS,** the Moving Ahead for Progress in the 21<sup>st</sup> Century (MAP-21) Act, Title 23 United States Code Section 134, and Title 49 United States Code Section 5303 require Metropolitan Planning Organizations to develop and approve a Transportation Improvement Program;

**WHEREAS,** the 1990 Clean Air Act Amendment requires all transportation plans and programs in nonattainment or maintenance areas demonstrate conformity to applicable state implementation plans for air quality improvement;

**WHEREAS,** MAP-21, Title 23 United States Code Section 134, and Title 49 United States Code Section 5303 require projects contained in the Transportation Improvement Program to be financially constrained;

**WHEREAS,** MAP-21, Title 23 United States Code Section 134, and Title 49 United States Code Section 5303 require Transportation Improvement Programs be developed and amended in consultation with all interested parties;

**WHEREAS**, a public comment period was held between August 5 and September 4, 2013, for people to review and comment on proposed projects in the program;

**WHEREAS,** the Community Planning Association of Southwest Idaho desires to take timely action to ensure the availability of federal funds; and

**WHEREAS,** the Community Planning Association of Southwest Idaho has developed the FY2014-2018 Regional Transportation Improvement Program for Ada and Canyon Counties, and corresponding Air Quality Conformity Demonstration for Northern Ada County, in compliance with all applicable state and federal regulations.

**NOW, THEREFORE, BE IT RESOLVED,** that the Community Planning Association of Southwest Idaho Board of Directors approves the Final FY2014-2018 Regional Transportation Improvement Program and the associated Air Quality Conformity Demonstration.

**DATED** this 16<sup>th</sup> day of September 2013.

**APPROVED:** 

Bryce Millar, Chair Community Planning Association of Southwest Idaho Board of Directors

700 N. East 2nd Street, Suite 200

Meridian, ID 83642

P. 208.855.2558

## FOREWORD

The federal government mandates that any transportation projects using federal funds or deemed to be "regionally significant" in nonattainment and maintenance areas cannot contribute to a degradation of air quality (40CFR93). Thus, transportation plans must "conform" to air quality plans. Transportation conformity is demonstrated in a nonattainment or maintenance area when it can be shown, within the applicable guidelines and regulations, that planned transportation projects listed in a transportation program or plan will not cause or contribute to exceedances of the U.S. Environmental Protection Agency's (EPA's) health-based air quality standards. A finding of nonconformity would prevent the implementation of certain federally funded and/or regionally significant transportation projects.

Only EPA's criteria pollutants<sup>1</sup> are subject to conformity analyses. One of two tests is used in a conformity demonstration:

<u>Budget</u>: State air quality implementation or maintenance plans for nonattainment or maintenance areas will often have maximum limits on the amounts of pollutants that transportation related sources emit. These maximum emissions limits on transportation related sources are known as "budgets." A transportation conformity budget test consists of a comparison between regional emissions estimates that include the impacts associated with planned transportation projects to the established budget. If the budget is not exceeded by the emissions estimate, then conformity has been demonstrated.

<u>Build/No Build</u>: Conceptually, this process is rather simple - estimate the amount of a given pollutant emitted in a region before the programmed projects are built (no build scenario) and after construction (build scenario). If the emissions from a build scenario are equal to or less than the emissions from a no build scenario, conformity has been demonstrated. This test is used for nonattainment or maintenance areas where motor vehicle emissions budgets are not established.

This document contains the information and analyses necessary for the Federal Highway Administration and the Federal Transit Administration to make a transportation conformity finding the FY2014-2018 Regional Transportation Improvement Program.

<sup>&</sup>lt;sup>1</sup> Particulate pollution and ground-level ozone are the most widespread health threats. EPA calls these pollutants "criteria" air pollutants because it regulates them by developing human health-based and/or environmentally-based criteria (science-based guidelines) for setting permissible levels.

## SUMMARY

The U.S Environmental Protection Agency's Motor Vehicle Emission Simulator (MOVES) and the Community Planning Association of Southwest Idaho's most current and approved travel demand model were used to estimate pollutant emissions from the transportation projects contained in the FY2014-2018 Regional Transportation Improvement Program (TIP). A TIP is a short-range (5-year) capital improvement budget for the transportation system in a given urbanized area. The Interagency Consultation Committee approved the modeling methodologies and assumptions used in the regional emissions analyses including the applicable transportation model networks. Growth and demographic assumptions from the region's recently approved *Communities in Motion 2040* Vision and current regional longrange transportation plan, *Communities in Motion 2035*, are also used in this demonstration.

The Northern Ada County PM<sub>10</sub> State Implementation Plan, Maintenance Plan: Ten-Year Update contains motor vehicle emissions budgets for three pollutants: coarse particulate matter oxides of nitrogen, and volatile organic compounds. Emissions budget tests, as required by 40CFR93.118, demonstrate conformity of the FY2014-2018 TIP.

The Northern Ada County Air Quality Maintenance Area Second 10-Year Carbon Monoxide Limited Maintenance Plan does not contain any motor vehicle emissions budgets. The EPA does not require areas under a "limited maintenance plan" to conduct regional emissions analyses to demonstrate conformity. However, COMPASS conducts a Carbon Monoxide emissions analysis as requested by the Idaho Department of Environmental Quality to aid in regional air quality planning.

# I. INTRODUCTION

### Community Planning Association of Southwest Idaho

The Community Planning Association of Southwest Idaho (COMPASS) is an association of local governments in Ada and Canyon Counties, Idaho. It provides transportation planning and a host of other planning and community services to its member agencies and the general public. Since 1977, COMPASS, formerly known as the Ada Planning Association, has been designated as the Metropolitan Planning Organization (MPO) for northern Ada County. In April 2003, COMPASS was designated as the MPO for the Nampa Urbanized Area, located in neighboring Canyon County. The agency's service area covers Ada and Canyon counties.

#### **Clean Air Act Designations**

#### Coarse Particulate Matter (PM<sub>10</sub>)

Northern Ada County is designated as a maintenance area in attainment of the 24-hour PM<sub>10</sub> National Ambient Air Quality Standard (NAAQS). Appendix A shows the extent of the maintenance area boundaries. The last non-agricultural based exceedance of the 24-hour PM<sub>10</sub> NAAQS occurred in 1991. Prior to March 12, 1999, Northern Ada County was designated as a nonattainment area for  $PM_{10}$ . However, on that date, the U.S. Environmental Protection Agency (EPA) Administrator signed a revocation of Northern Ada County's nonattainment designation based on changes made to the PM<sub>10</sub> NAAQS. This ruling was challenged in the Ninth District Circuit Court. On January 31, 2001, the U.S. Department of Justice approved a settlement agreement for the Idaho Clean Air Force et al. v. EPA et al. lawsuit. A major component of the settlement agreement required the Idaho Department of Environmental Quality (DEQ) to update Northern Ada County's PM<sub>10</sub> State Implementation Plan (SIP). In September 2003, the EPA approved the Northern Ada County PM<sub>10</sub> SIP Maintenance Plan and Redesignation Request. The Northern Ada County PM<sub>10</sub> State Implementation Plan, Maintenance Plan: Ten-Year Update<sup>2</sup> was submitted to EPA in March 2013. On May 17, 2013, EPA announced receipt of the "maintenance plan" and issued determination of adequacy of the motor vehicle emission budgets for transportation conformity purposes.

Commonly, past exceedances of the 24-hour  $PM_{10}$  NAAQS in Northern Ada County occurred during severe wintertime air stagnation events. These events, known as atmospheric inversions, are caused when cold, stagnant air is held close to the valley floor by warmer air aloft. During these events, particulates form in the atmosphere out of such gaseous pollutants as oxides of nitrogen (NO<sub>X</sub>) and volatile organic compounds (VOCs). Thus, both NO<sub>X</sub> and VOCs are considered precursors of PM<sub>10</sub>. As a result, the PM<sub>10</sub> maintenance plan contains approved PM<sub>10</sub>, NO<sub>X</sub>, and VOC motor vehicle emissions budgets.

## Carbon Monoxide (CO)

Additionally, Northern Ada County is designated as a limited maintenance area in attainment of the carbon monoxide NAAQS. Northern Ada County has not experienced a violation of the CO NAAQS since 1987. DEQ submitted the *Limited Maintenance Plan and Request for Redesignation to Attainment for the Northern Ada County Carbon Monoxide Not-Classified Nonattainment Area* to EPA in December 2001. EPA approved the limited maintenance plan and subsequently redesignated the area in December 2002. The *Northern Ada County Air Quality Maintenance Area Second 10-Year Carbon Monoxide Limited Maintenance Plan* was

<sup>2</sup> http://www.deq.idaho.gov/media/971222-ada county pm10 sip 0213.pdf

approved by EPA September 2012. Maintenance areas under a limited maintenance plan are not required to demonstrate their transportation programs or long-range transportation plans conform through a regional emissions analysis. Therefore, there are no applicable CO motor vehicle emissions budgets established for Northern Ada County.

#### Rules

As described previously, The Northern Ada County  $PM_{10}$  State Implementation Plan, Maintenance Plan: Ten-Year Update ( $PM_{10}$  maintenance plan) establishes motor vehicle emissions budgets for  $PM_{10}$ ,  $NO_x$ , and VOCs. Therefore, to satisfy transportation conformity requirements established by 40CFR93.118, budget tests must be performed for the FY2014-2014 Regional Transportation Improvement Program (TIP). A TIP is a short-range (5-year) capital improvement budget for the transportation system in a given urbanized area. Budget tests are satisfied when regional emissions estimates based on the transportation projects outlined in a TIP or transportation plan are less than or equal to "budgets" established by SIPs and/or air quality maintenance plans.

EPA guidance related to "limited maintenance plans" eliminates this requirement with regard to CO for Northern Ada County's conformity demonstrations:

...in areas with approved limited maintenance plans, Federal actions requiring conformity determinations under the transportation conformity rule could be considered to satisfy the budget test required in section 93.118, 93.119, and 93.120 of the rule.<sup>3</sup>

Therefore, CO motor vehicle emissions budget tests are not federally required for Northern Ada County. However, DEQ requires COMPASS conduct a build/no build analysis of its programs and long-range plans in order to facilitate good air quality planning. If the results of this analysis show an unacceptable increase in CO emissions, DEQ may choose to require mitigation measures.

#### Interagency Consultation

Idaho Administrative Code (IDAPA 58.01.01.567) requires nonattainment and maintenance areas establish an interagency consultation committee on transportation conformity. The Interagency Consultation Committee (ICC) approved the assumptions and methodologies employed in the development of the regional emissions analysis in this demonstration on July 2, 2013. The approved assumptions and methodologies are listed in Appendices B and C. The roadway project list was approved by the ICC on July 2, 2013. A complete listing of the ICC requirements can be found in Idaho Administrative Code (IDAPA 58.01.01.563-574).

## Budget Test

A budget test is a comparison of emissions estimates to an established limit (or budget) for motor vehicles. As per 40CFR93.118(b), budget tests must be preformed:

...each year for which the applicable ... implementation plan specifically establishes motor vehicle emissions budget(s), for the last year of the transportation plan's forecast period, and for any intermediate years as necessary so that the years for which consistency is demonstrated are no more than ten years apart...

<sup>&</sup>lt;sup>3</sup> Page 8 of the Northern Ada County Air Quality Maintenance Area Second 10-Year Carbon Monoxide Limited Maintenance Plan <u>http://www.deq.idaho.gov/media/909866-ada-county-co-maintenance-plan-2011.pdf</u>

The Northern Ada County PM<sub>10</sub> State Implementation Plan, Maintenance Plan: Ten-Year Update established motor vehicle emissions budgets. Budget tests were performed for:

- 2014 Base year of the FY2014-2018 TIP
- 2018 Last year of the FY2014-2018 TIP
- 2025 Intermediate analysis year, no more than 10 years between analysis years
- 2035 Long-range transportation plan (Communities in Motion 2035) horizon year

Results for the four scenarios are show in Table 2, Table 4, Table 6, and Table 8.

#### **Regionally Significant Projects**

Regional emissions analyses, for the purposes of demonstrating transportation conformity of a TIP or long-range plan, must include all regionally significant and/or federally funded projects in the nonattainment or maintenance area.

40CFR93.101<sup>4</sup> defines a regionally significant project as:

... a transportation project (other than an exempt project) that is on a facility which serves regional transportation needs (such as access to and from the area outside of the region, major activity centers in the region, major planned developments such as new retail malls, sports complexes, etc., or transportation terminals as well as most terminals themselves) and would normally be included in the modeling of a metropolitan area's transportation network, including at a minimum all principal arterial highways and all fixed guideway transit facilities that offer an alternative to regional highway travel.

Idaho Administrative Code (IDAPA 58.01.01.566)<sup>5</sup> further defines a regionally significant project as:

A transportation project, other than an exempt project, that is on a facility which serves regional transportation needs... and would normally be included in the modeling of a metropolitan area's transportation network, including, at a minimum:

- a. All principal arterial highways;
- *b.* All fixed guideway transit facilities that offer an alternative to regional highway travel; and
- *c.* Any other facilities determined to be regionally significant through Section 570, interagency consultation.

The ICC maintains discretionary authority in interpreting and applying these definitions to the area's transportation programs, plans, and projects. For the purposes of this conformity determination, all applicable roadway projects, despite their significance, were included in the travel demand model networks.

<sup>4</sup> Code of Federal Regulations Title 40: Protection of Environment

<sup>5</sup> Idaho Administrative Code Rules for the Control of Air Pollution in Idaho

#### **Regionally Significant Roadway Project Definition**

On January 30, 2002, the ICC developed the following definition of a "Regionally Significant" project:

A transportation project in Ada County, Idaho is designated "Regionally Significant" if:

- (a) the project is for the improvement of either:
  - *(i) a principal arterial or higher functional classification; or*
  - (ii) a minor arterial which will have a twenty (20) year projected traffic volume of at least 45,000 vehicles a day after completion of the project; and
- *(b) the project will add at least one new continuous vehicular lane which either: (i) extends from one intersecting principal or minor arterial to another intersecting principal or minor arterial; or* 
  - (ii) in the case of an interstate, extends from the on ramp of one interstate interchange to a point beyond the off ramp of the next adjacent interstate interchange.

## Regionally Significant Transit Project Definition

On August 31, 2005, the ICC adopted the following definition of a "Regionally Significant" transit project:

A transit project in Ada County, Idaho is designated "Regionally Significant" if the transit project:

- (a) has the potential to change the vehicle demand of an existing roadway classified as a principal arterial or higher by 400 vehicles per hour, or 4,000 vehicles per weekday; and
- (b) is a transit service or facility that provides services to (or connects) at a minimum:
  - (i) two counties and;
  - (ii) three incorporated cities

## Exempt Projects:

Pursuant to 40CFR93.126 (Exempt Projects), certain projects listed in a long-range transportation plan or TIP may proceed even in the absence of a conformity finding/demonstration. Exempt projects include highway safety or mass transit projects, landscaping projects, roadway rehabilitation and repair, transportation enhancement projects, and transportation planning activities that do not lead directly to construction. However, the exempt projects listed in 40CFR93.126 are not considered exempt if the ICC concludes that they may have an adverse impact on air quality.

In addition, 40CFR93.127 (Projects Exempt from Regional Emissions Analyses) considers projects, such as intersection signalization, changes in alignment, bus terminals, and transit transfer points, exempt from regional emissions analyses. However, these projects must demonstrate project-level conformity. As with the types of exempt projects listed in 40CFR93.126, the projects listed in 40CFR93.127 may not be considered exempt if the ICC concludes they may have an adverse impact on air quality.

#### **Transportation Control Measures**

As per 40CFR93.113(c), in order for a TIP or long-range transportation plan to be conforming, it cannot interfere with the implementation of any transportation control measures. There are no transportation control measures requiring implementation in either the *Northern Ada County PM*<sub>10</sub> State Implementation Plan, Maintenance Plan: Ten-Year Update or the Northern Ada County Air Quality Maintenance Area Second 10-Year Carbon Monoxide Limited Maintenance Plan. Therefore, the FY2014-2018 TIP meets the requirements of 40CFR93.113(c).

# **II. EMISSIONS ESTIMATION**

#### **Emissions Analysis Assumptions and Tools**

This air quality conformity demonstration is based upon average speed distributions for each roadway type by 16 speed "bins." The regional travel demand model's average daily estimates or forecasts for each roadway segment provide the necessary data for this input. Emissions factors are generated using the latest version of EPA's motor vehicle emissions model (MOVES2010b). A regional emission analysis was conducted as described below.

#### COMPASS' Travel Demand Model

The travel demand model provides estimates of average weekday and peak hour travel demand for each link of a given transportation network based on current and future growth assumptions. In addition to travel demand, the model produces weekday vehicle miles of travel forecasts, congested network speeds, and other data relevant to regional emissions analyses. The travel demand model is regularly maintained and updated to include all completed roadway projects. Future-year model networks include anticipated widening and new roadway projects, regardless of significance or exemption status. Transportation network components include interstates, principal arterials, minor arterials, collectors, and select local roads in Ada and Canyon Counties.

COMPASS' travel demand modeling activities are performed under the review of the Transportation Model Advisory Committee (TMAC). TMAC is a technical committee formed by the COMPASS Board of Directors. The committee is made up of local experts, technical staff from COMPASS member agencies, and local traffic engineers from both the public and private sectors. TMAC works with COMPASS staff to periodically calibrate and validate the travel demand model to reflect the actual travel patterns and behaviors in the Treasure Valley. COMPASS' current travel demand model is calibrated and validated to 2008 conditions. To learn more about the travel demand model visit http://www.compassidaho.org/prodserv/traveldemand.htm.

#### **Demographic Data**

The COMPASS Board approves the official population and employment forecast control totals for the Treasure Valley. Between September 2011 and October 2012, COMPASS, its member agencies and stakeholders participated in the development of a preferred growth scenario – *Communities in Motion 2040* Vision. This preferred growth scenario was based on approved population and employment forecasts and adopted by the COMPASS Board in October 2012. To learn more about the process and growth allocations visit

http://www.compassidaho.org/prodserv/cim2040 scenarioplanning.htm.

Demographic data for the analysis years of 2014 and 2018 were developed using data from the 2010 Census and 2015 and 2020 demographic forecasts which were accepted by the Demographic Advisory Committee on November 28, 2012.

#### **Roadway Network Assumptions**

The projects used in the regional emissions analysis for the FY2014-2018 TIP are derived from:

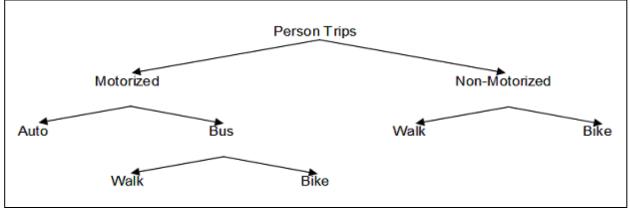

- COMPASS' FY2014-2018 TIP •
- Ada County Highway District's (ACHD's) FY2013-2017 Five-Year Work Plan •
- Idaho Transportation Investment Program (ITIP) for FY2014-2018
- ACHD's FY2012 Capital Improvement Plan (CIP) (FY2012-2031)
- Communities in Motion 2035 (CIM 2035), the regional long-range transportation plan • for Ada and Canyon Counties

Roadway projects were placed into analysis (or budget) year networks based on information contained in the above sources. The anticipated project completion date is used to place the transportation project in the appropriate network year. Projects in preliminary development were placed in the roadway network year based on information contained in ACHD's CIP. Other future roadway projects listed on the funded list of both CIM 2035 and ACHD's CIP were placed in a roadway network year based on information contained in ACHD's CIP. Roadway projects listed as unfunded in CIM 2035 <u>and</u> right-of-way only/unfunded in ACHD's CIP were not included in the roadway networks.

#### Transit Service Assumptions

Regional impacts from access to the area's transit system were included in the emissions analysis. This was done within COMPASS' travel demand model using a "mode choice" model. A "mode choice" model is the third step in a traditional four-step travel demand model, such as the one maintained by COMPASS. It takes estimates of "person trips" and tries to predict the mode of travel the trip will use.

Figure 1 shows the motorized modes available to the travel demand model for assignment. Transit trips are assigned to a transit network input into the travel demand model. Nonmotorized trips are not assigned to a network.

## Figure 1: COMPASS Model Travel Modes

Currently, no major system expansion is funded for the region's transit system in either the FY2014-2018 TIP or CIM 2035. Therefore, only the transit system as it exists today is included in the analysis through 2035. The current system includes:

- Sixteen routes and approximately 717 stops with peak hour headways between 20-60 minutes in the Boise/Garden City service area.
- Five Nampa and Caldwell fixed routes with peak hour headways up to 60 minutes and one Nampa/Caldwell dial-a-ride service route.
- Five inter-county routes (between Ada and Canyon Counties) with up to 30 minute headways during the morning/afternoon peak periods and 2-3 hour headways during off peak periods.

Chapter 6 in CIM 2035 contains more general information on the region's current transit system. Specific information on the routes and schedules used to model the transit system can be found at Valley Regional Transit's website: <u>http://www.valleyride.org/</u>.

#### **Emissions Modeling**

EPA's new emissions model, Motor Vehicle Emissions Estimator (MOVES) was used to estimate the air quality impacts associated with current and future roadway networks. The MOVES model uses local data inputs for climate, elevation, Northern Ada County's vehicle emissions testing program, and travel demand model forecasted roadway speeds to develop emission factors for specified air pollutants. Appendix B summarizes the MOVES modeling assumptions approved by the ICC for use in this demonstration. Both the PM<sub>10</sub> and CO Maintenance Plans were recently updated by DEQ's Boise Regional Office. All of the methodologies, assumptions, processes, and results are documented in the *Northern Ada County PM<sub>10</sub> State Implementation Plan, Maintenance Plan: Ten-Year Update* and the *Northern Ada County Air Quality Maintenance Area Second 10-Year Carbon Monoxide Limited Maintenance Plan.* Both plans and associated appendices are available on DEQ's website, as listed below:

PM<sub>10</sub> Maintenance Plan

CO Maintenance Plan http://www.deq.idaho.gov/media/909866-ada-county-co-maintenance-plan-2011.pdf

CO Maintenance Plan appendices

http://www.deq.idaho.gov/media/909870-ada-county-co-maintenance-plan-2011appendices.pdf

EPA's model Motor Vehicle Emissions Estimator (MOVES) <u>http://www.epa.gov/otaq/models/moves/index.htm</u>.

As described on page 8,  $PM_{10}$ , VOC, and  $NO_x$  budget tests were performed under the four scenario years: 2014, 2018, 2025, and 2035. Results are shown in Table 2, Table 4, Table 6, and Table 8.

#### 2014 Baseline Scenario

The 2014 scenario uses near-term population and employment estimates with the 2014 roadway network which includes the projects listed in Table 1. (*Note: The numbers in the* "*No."* column are for reference only).

	Table 1: Projects Included in the 2014 Network for the 2014 Scenario										
No.	Project	Location	Lanes	Regionally Significant?	Federal Aid?	Exempt?	Identifica tion No. <sup>1</sup>				
1.	Eagle Rd (SH 55) Phase 2	NB Franklin Rd to Fairview Ave	6	Yes	No	No	13349				
2.	Eagle Rd (SH 55)	SB Franklin Rd to I-84	6	Yes	Yes	No	H331

<sup>1</sup> The fiscal constraints of a long-range plan are more flexible than those of a TIP. Therefore, TBD means To Be Determined, as a funding source has not been identified. <sup>2</sup>Identification No: Alphanumeric identification numbers refer to projects in ACHD's Five-Year Work Plan or CIP. Blanks indicate an identification number has not been assigned.

Table 8 shows estimated motor vehicle emissions for  $\text{PM}_{10},$  VOC, and  $\text{NO}_{\text{X}}$  from the 2035 scenario.

Table 8: 2035 Estimated Emissions, Tons per Day							
	PM <sub>10</sub>				VOC	NO <sub>x</sub>	
2035	Unpaved Road Dust Emissions	Dust	and	Emitted			
Estimated Emissions	2.65	41.86	0.80	45.31	5.67	10.08	
Budget	n/a	n/a	n/a	60.1	17.2	34.2	

#### **Carbon Monoxide Emissions**

To satisfy DEQ requirements, a regional CO emissions analysis was conducted using EPA's MOVES model and the COMPASS travel demand model. Specific information on the models and their inputs can be found in previous sections of this document. Build emissions were estimated and compared to no build emissions estimates. A build scenario estimates emissions for a given analysis year assuming the appropriate programmed/planned roadway/transit projects have been constructed. Conversely, a no build scenario estimates emissions for a given analysis year using the transportation system as it exists in the base year (e.g., before programmed or planned projects are built). This comparison provides the CO emissions impacts to the region from the planned transportation system.

#### **Build/No Build Scenarios**

The build scenarios use transportation networks and demographic assumptions specific to the analysis year. These are the same scenarios used to estimate  $PM_{10}$ ,  $NO_X$ , and VOC emissions. Table 1, Table 3, Table 5, and Table 7 provide more detailed information on the roadway projects used to develop the build scenario networks.

The no build scenarios use the 2014 (baseline) transportation network with the demographic assumptions specific to the analysis year. Table 1 provides more detailed information on the roadway projects included in the 2014 transportation network.

Table 9 shows the build and no build CO emissions estimates for 2014, 2018, 2025, and 2035.

Table 9: Build/No Build Scenario CO Emissions						
	Year					
	2014	2018	2025	2035		
Build CO Emissions ( <i>Ton/day</i> )	92.67	83.75	92.20	113.58		
No Build CO Emissions (Ton/day)	n/a	83.77	92.01	114.71		

## **III. CONCLUSIONS**

## PM<sub>10</sub> Budget Test

The results of the  $PM_{10}$  budget test for the FY2014-2018 TIP show that the emissions impacts associated with the planned improvements to the northern Ada County transportation system (projects listed in Table 1, Table 3, Table 5, and Table 7) will not exceed the  $PM_{10}$  emissions budgets established by the *Northern Ada County*  $PM_{10}$  *State Implementation Plan, Maintenance Plan: Ten-Year Update* (Figure 2).

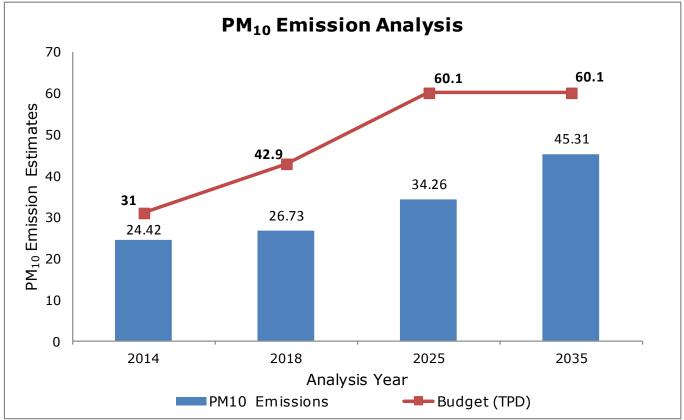

Figure 2: PM<sub>10</sub> Budget Test Results

## **VOC Budget Test**

The results of the VOC budget test for the FY2014-2018 TIP show that the emissions impacts associated with the planned improvements to the northern Ada County transportation system (projects listed in Table 1, Table 3, Table 5, and Table 7) will not exceed the VOC emissions budgets established by the *Northern Ada County PM*<sub>10</sub> State Implementation Plan, Maintenance Plan: Ten-Year Update (Figure 3).

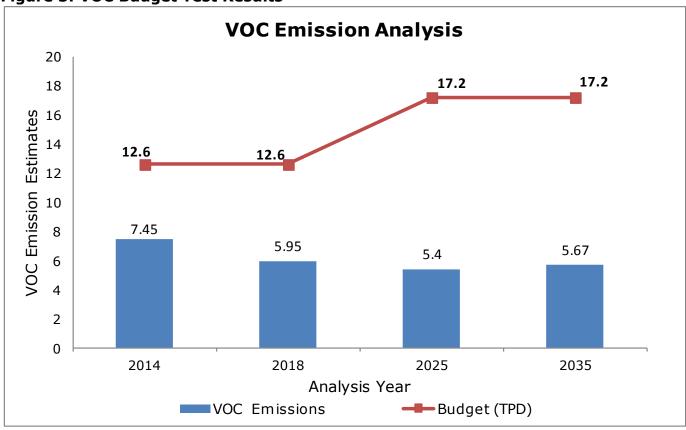

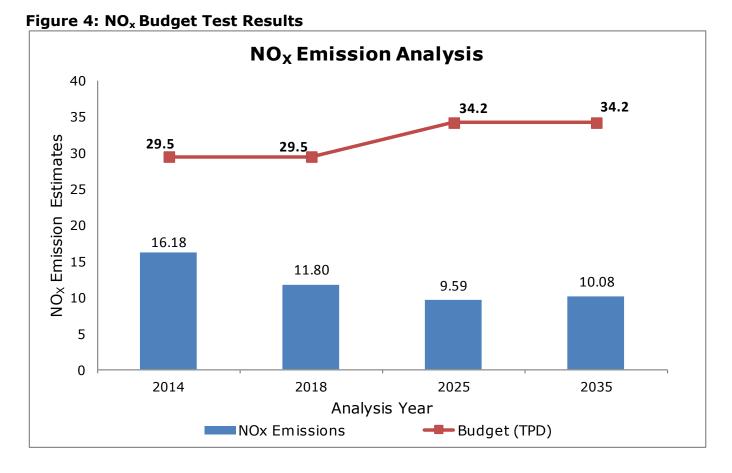

Figure 3: VOC Budget Test Results

### NO<sub>x</sub> Budget Test

The results of the NO<sub>x</sub> budget test for the FY2014-2018 TIP show that the emissions impacts associated with the planned improvements to the northern Ada County transportation system (projects listed in Table 1, Table 3, Table 5, and Table 7) will not exceed the NO<sub>x</sub> emissions budgets established by the *Northern Ada County PM*<sub>10</sub> State Implementation Plan, *Maintenance Plan: Ten-Year Update* (Figure 4).

### **CO Planning Analyses**

### **Build/No Build Emissions Comparison:**

Figure 5 shows the comparison between the build and no build emissions scenarios for each analysis year. Again, the purpose of these comparisons is not to demonstrate conformity to the CO limited maintenance plan, but rather to facilitate good air quality planning in northern Ada County.

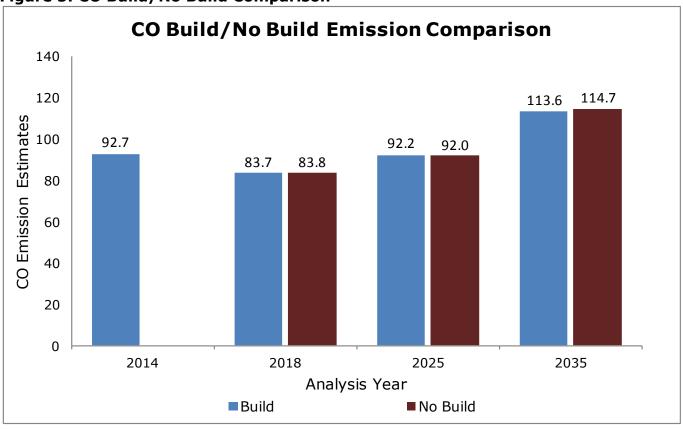

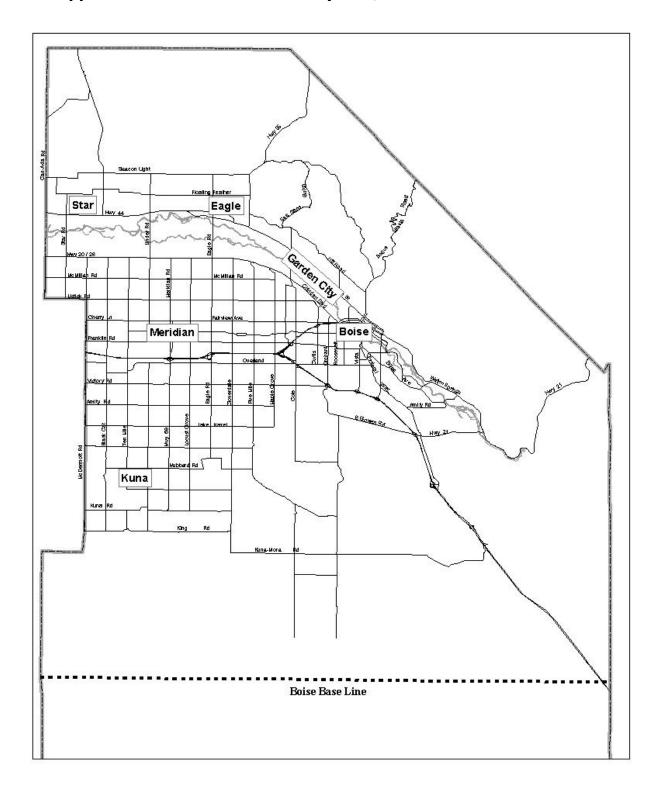

Figure 5: CO Build/No Build Comparison

The comparisons show a very slight increase in CO emissions for the build scenario in 2025, but slight decreases for 2018 and 2035. These increases in CO emission estimates are due to a reduction in roadway congestion, which increased network speeds forecasted by the regional travel demand model. CO emissions factors are very sensitive to speed. Since the 2025 build scenario emission estimates are higher than the no build, the build scenario is compared to the 1990 CO emissions as allowed by the conformity rule under 40CFR93.113(c)(ii). The 1990 on-road mobile source emissions are 58,777.3 tons per year (i.e., 161.03 tons per day). Clearly, the 2025 CO emission estimates of 92.2 tons per day are below the 1990 CO emissions.

# **APPENDICES**

# Appendix A: Northern Ada County PM<sub>10</sub> and CO Maintenance Area

# Legal Description for Northern Ada County PM<sub>10</sub> and CO Maintenance Area

The legal description of the area boundaries is as follows:

• Beginning at a point in the center of the channel of the Boise River where the section line between Sections 15 and 16 of Township 3 North, Range 4 East, crosses the Boise River.

Northern Boundary

- Thence down the center of the channel of the Boise River to a point opposite the mouth of Mores Creek.
- Thence in a straight-line going 44 degrees north and 38 minutes west until said line intersects the north line of Township 5 North in Range 1 East.
- Thence west to the northwest corner of Section 6, Township 5 North, Range 1 West.

Western Boundary

- Thence south to the northwest corner of Section 6, Township 3 North, Range 1 West.
- Thence east to the northeast corner of Section 5, Township3 North, Range 1 West.
- Thence south to the southeast corner of Section 32, Township 2 North, Range 1 West.
- Thence west to the northwest corner of Section 6, Township 1 North, Range 1 West.
- Thence south to the southwest corner of Section 31, Township 1 North, Range 1 West.

Southern Boundary

• Thence east to the southeast corner of Section 33, Township 1 North, Range 4 East.

Eastern Boundary

• Thence north to the point of beginning.

#### Appendix B: Approved Regional Emission Assumptions Table B-1: FY2014-2018 TIP MOVES Model Input Assumptions

Source type population and fleet age distribution:

DEQ decoded individual Idaho Department of Motor Vehicles (DMV) registration records of vehicles registered in the Treasure Valley using the Polk vehicle identification number (VIN) decoding system. The decoded VINs provide information regarding the vehicle make, model, age, and fuel types. This information was then used to develop the MOVES input.

#### Inspection Maintenance Program – June 1, 2010 - future

#### Ada County:

1) Two speed test (idle and 2500 RPM) for pre 1996 vehicles only.

- 2) Exhaust OBD check for 1996 and newer vehicles.
- 3) Evaporative system OBD check for 1996 and newer vehicles.
- 4) Compliance rate = 98.0%.
- 5) Waiver rate = 1.0%
- 6) Four-year grace period for new vehicles
- 7) Biennial testing effective January 1, 2010.

#### Canyon County:

- 1) Two speed test (idle and 2500 RPM) for pre 1996 vehicles only.
- 2) Evaporative gas cap check for 1996 and newer vehicles.
- 3) Exhaust OBD check for 1996 and newer vehicles.
- 4) Evaporative system OBD check for 1996 and newer vehicles.
- 5) Compliance rate = 98.0%.
- 6) Waiver rate = 1.0%
- 7) Five-year grace period for new vehicles
- 8) Biennial testing effective January 1, 2010.

#### <u>Meteorology</u>

The meteorology input compiles the average hourly temperature and relative humidity data for each county. Baseand future-year inventories were modeled using average hourly temperature and relative humidity data by county for each month from a representative weather station for each county. Ada County is represented by the National Weather Service station at the Boise Air Terminal and Canyon County is represented by the data set from the Caldwell Industrial Airport.

#### Fuel-Related Inputs

Alternative Vehicle Fuels and Technology (AVFT): Ada and Canyon Counties were modeled using a custom AVFT input file derived from VIN-decoded registration data. The same AVFT input was used for base and future years.

**Fuel Supply:** National default fuel supply inputs were used for all source types except transit buses. A large portion of the transit bus fleet in the Treasure Valley operates on compressed natural gas (CNG). For this reason, CNG fuels were included in base- and future-year modeling.

**Fuel Formulation:** With the exception of 10% ethanol in gasoline (E10), MOVES national default fuel formulations were used as base-year inputs for each county. These default values were judged to be reasonable based on local knowledge, except for the E10 market share. The base-year E10 market share was updated with information provided by fuel suppliers.

#### Average Speed Distribution

The average speed distribution allocates the different source types (vehicles) for each roadway type to 16 speed bins ranging from 0 to >75 miles per hour. Average speed distributions were developed from the regional travel demand model average daily estimates or forecasts for each roadway segment and hourly traffic count statistics developed from detailed automatic traffic recorder (ATR) traffic count data provided by Idaho Transportation Department (ITD).

The hourly ATR-based traffic count profiles for each roadway type were used to estimate hourly volume on each segment and the modified Bureau of Public Roadways volume/capacity curve was used to develop the average speed distribution database for each hour.

Hourly Vehicle Speed = Free Flow Speed  $*\left(1 + A * \left(\frac{Volume}{Capacity}\right)^B\right)$ 

Where A and B are local coefficients used in the regional travel demand model as provided by COMPASS.

Base- and future-year average speed distributions were developed for all four MOVES road types using travel demand model base and future-year outputs developed by COMPASS for the Treasure Valley and detailed ATR data provided by ITD.
