

**COMPASS**  
COMMUNITY PLANNING ASSOCIATION  
of Southwest Idaho

*Working together to plan for the future*

Conformity Demonstration for the FY2018-2022  
Regional Transportation Improvement Program and  
Amended Communities in Motion 2040

Report No. 02-2018

Adopted by the COMPASS Board on October 16, 2017

Resolution No. 03-2018

**THIS DOCUMENT IS SUBMITTED TO THE U.S. DEPARTMENT OF TRANSPORTATION IN FULFILLMENT OF THE REQUIREMENTS OF THE 1990 CLEAN AIR ACT AMENDMENTS, THE FEDERAL TRANSPORTATION AIR QUALITY CONFORMITY RULES (40CFR93), AND THE STATE OF IDAHO ADMINISTRATIVE CODE ON TRANSPORTATION CONFORMITY (IDAPA 58-01.01.563-574).**

**RESOLUTION NO. 03-2018**

**FOR THE PURPOSE OF APPROVING THE  
FY2018-2022 REGIONAL TRANSPORTATION IMPROVEMENT PROGRAM AND  
ASSOCIATED AIR QUALITY CONFORMITY DEMONSTRATION**

**WHEREAS**, the Community Planning Association of Southwest Idaho has been designated by the Governor of Idaho as the metropolitan planning organization responsible for transportation planning in Ada and Canyon Counties;

**WHEREAS**, the Fixing America's Surface Transportation (FAST) Act, Title 23 United States Code Section 134, and Title 49 United States Code Section 5303 requires metropolitan planning organizations to develop and approve a Transportation Improvement Program;

**WHEREAS**, the 1990 Clean Air Act Amendment requires all transportation plans and programs in nonattainment or maintenance areas demonstrate conformity to applicable state implementation plans for air quality improvement;

**WHEREAS**, FAST Act, Title 23 United States Code Section 134 and Title 49 United States Code Section 5303 require projects contained in the Transportation Improvement Program to be financially constrained;

**WHEREAS**, FAST Act, Title 23 United States Code Section 134 and Title 49 United States Code Section 5303 require the Transportation Improvement Program be developed and amended in consultation with all interested parties;

**WHEREAS**, a public comment period was held between July 17 and August 15, 2017, for people to review and comment on proposed projects in the program;

**WHEREAS**, a second public comment period was held between August 27 and September 11, 2017, to address significant changes proposed after the initial comment period;

**WHEREAS**, the Community Planning Association of Southwest Idaho desires to take timely action to ensure the availability of federal funds; and

**WHEREAS**, the Community Planning Association of Southwest Idaho has developed the FY2018-2022 Regional Transportation Improvement Program for Ada and Canyon Counties, and corresponding air quality conformity demonstration for Northern Ada County, in compliance with all applicable state and federal regulations.

**NOW, THEREFORE, BE IT RESOLVED**, that the Community Planning Association of Southwest Idaho Board of Directors approves the Final FY2018-2022 Regional Transportation Improvement Program and the associated air quality conformity demonstration.

**Adopted** this 16<sup>th</sup> day of October 2017.

By: 

**Steven Rule, Chair**  
**Community Planning Association**  
**of Southwest Idaho Board of Directors**

**ATTEST:**

VMT	Vehicle miles of travel
VOC	Volatile organic compounds

## FOREWORD

The federal government mandates that any transportation project using federal funds or deemed to be “regionally significant” in nonattainment and maintenance areas cannot contribute to a degradation of air quality (40CFR93). Thus, transportation plans must “conform” to air quality plans. Transportation conformity is demonstrated in a nonattainment or maintenance area when it can be shown, within the applicable guidelines and regulations, that planned transportation projects listed in a transportation program or plan will not cause or contribute to exceedances of the U.S. Environmental Protection Agency’s (EPA’s) health-based air quality standards. A finding of nonconformity would prevent the implementation of certain federally funded and/or regionally significant transportation projects.

Only EPA’s criteria pollutants<sup>1</sup> are subject to conformity analyses. One of two tests is used in a conformity demonstration:

Budget: State air quality implementation and maintenance plans for nonattainment and maintenance areas will often have maximum limits on the amounts of pollutants that transportation related sources emit. These maximum emissions limits on transportation related sources are known as “budgets.” A transportation conformity budget test consists of a comparison between regional emissions estimates that include the impacts associated with planned transportation projects to the established budget. If the budget is not exceeded by the emissions estimate, then conformity has been demonstrated.

Build/No Build: Conceptually, this process is rather simple - estimate the amount of a given pollutant emitted in a region before the programmed projects are built (no build scenario) and after construction (build scenario). If the emissions from a build scenario are equal to or less than the emissions from a no build scenario, conformity has been demonstrated. This test is used for nonattainment or maintenance areas where motor vehicle emissions budgets are not established.

This document contains the information and analyses necessary for the Federal Highway Administration and the Federal Transit Administration to make a transportation conformity finding for the FY2018-2022 Regional Transportation Improvement Program and the Amended *Communities in Motion 2040* regional long-range transportation plan for Ada and Canyon Counties, Idaho.

---

<sup>1</sup> EPA sets air quality standards for six common pollutants, referred to as ["criteria" air pollutants](#). These standards are developed based on human health and/or environmental criteria (science-based guidelines). Of the six criteria pollutants, particulate pollution and ground-level ozone are the two most widespread health threats.

## SUMMARY

The U.S. Environmental Protection Agency's (EPA's) Motor Vehicle Emission Simulator (MOVES) and the Community Planning Association of Southwest Idaho's (COMPASS') most current travel demand model were used to estimate pollutant emissions from the transportation projects contained in the FY2018-2022 Regional Transportation Improvement Program (TIP) and Amended *Communities in Motion 2040* (CIM 2040) regional long-range transportation plan. A TIP is a short-range (five-year) capital improvement budget for the transportation system in a given urbanized area. The Interagency Consultation Committee approved the modeling methodologies and assumptions used in the regional emissions analyses including the applicable transportation model networks. Growth and demographic assumptions from the region's *Communities in Motion 2040* Vision, updated and reconciled in spring 2017, are used in this demonstration.

Transportation conformity is demonstrated in a nonattainment or maintenance area when it can be shown, within the applicable guidelines and regulations, that planned transportation projects listed in a transportation program or plan will not cause or contribute to exceedances of EPA's health-based air quality standards. A finding of nonconformity would prevent the implementation of certain federally funded and/or regionally significant transportation projects. Northern Ada County is a "maintenance area" for two air pollutants – coarse particulate matter (PM<sub>10</sub>) and carbon monoxide.

The *Northern Ada County PM<sub>10</sub> State Implementation Plan, Maintenance Plan: Ten-Year Update*<sup>2</sup> contains motor vehicle emissions budgets for three pollutants: coarse particulate matter, oxides of nitrogen, and volatile organic compounds. Emissions budget tests, as required by 40CFR93.118, demonstrate conformity of FY2018-2022 TIP and Amended CIM 2040. The *Northern Ada County Air Quality Maintenance Area Second 10-Year Carbon Monoxide Limited Maintenance Plan*<sup>3</sup> does not contain any motor vehicle emissions budgets. However, COMPASS conducts a build versus no build carbon monoxide emissions analysis per the *Northern Ada County Air Quality Maintenance Area Second 10-Year Carbon Monoxide Limited Maintenance Plan* to aid in regional air quality planning.

While areas with maintenance plans approved under EPA's limited maintenance plan option are not subject to the budget test, the areas remain subject to other transportation conformity requirements of 40CFR93, subpart A. Thus, the metropolitan planning organization (MPO) in the area or the state must document and ensure that:

- a. *Transportation plans and projects provide for timely implementation of SIP [State Implementation Plan] transportation control measures in accordance with 40CFR93.113;*
- b. *Transportation plans and projects comply with the fiscal constraint element per 40CFR93.108;*
- c. *The MPO's interagency consultation procedures meet applicable requirements of 40CFR93.105;*
- d. *Conformity of transportation plans is determined no less frequently than every four years, and conformity of plan amendments and transportation projects is demonstrated in accordance with the timing requirements specified in 40CFR93.104;*
- e. *The latest planning assumptions and emissions model are used as set forth in 40CFR93.110 and 40CFR93.111;*

<sup>2</sup> [http://www.deq.idaho.gov/media/971222-ada\\_county\\_pm1\\_0\\_sip\\_0213.pdf](http://www.deq.idaho.gov/media/971222-ada_county_pm1_0_sip_0213.pdf)

<sup>3</sup> <http://www.deq.idaho.gov/media/909866-ada-county-co-maintenance-plan-2011.pdf>

- f. Projects do not cause or contribute to any new localized carbon monoxide or particulate matter violations, in accordance with procedures specified in 40CFR93.123; and*
- g. Project sponsors and/or operators provide written commitments as specified in 40CFR93.125. [40CFR93, subpart A]*

**The estimated emissions demonstrate that the projects contained in the FY2018 – 2022 TIP and Amended CIM 2040 meet air quality conformity requirements for Northern Ada County and will not degrade air quality.** Figures 4 – 7 (pages 25 – 28) show estimated emissions as compared to pollutant budgets for coarse particulate matter, volatile organic compounds, oxides of nitrogen, and carbon monoxide.

## I. INTRODUCTION

### Community Planning Association of Southwest Idaho

The Community Planning Association of Southwest Idaho (COMPASS) is an association of local governments in Ada and Canyon Counties, Idaho. It provides transportation planning and a host of other planning and community services to its member agencies and the general public. Since 1977, COMPASS, formerly known as the Ada Planning Association, has been designated as the metropolitan planning organization (MPO) for Ada County. In April 2003, COMPASS was designated as the MPO for the Nampa Urbanized Area, located in neighboring Canyon County. The agency's service area covers Ada and Canyon Counties.

### Clean Air Act Designations

The federal government sets health-based air quality standards for air pollutants, called the National Ambient Air Quality Standards, or NAAQS. Areas that have violated (not attained) the NAAQS are referred to as "nonattainment areas"; areas that were nonattainment areas in the past, but have re-attained the standard, are termed "maintenance areas." Northern Ada County is a maintenance area for two air pollutants – coarse particulate matter (PM<sub>10</sub>) and carbon monoxide (CO). Northern Ada County violated the NAAQS for these pollutants in the 1980s and early 1990s, and has been in compliance ever since.

The federal government mandates that any transportation projects using federal funds or deemed to be "regionally significant" in nonattainment and maintenance areas cannot contribute to a degradation of air quality (40CFR93). Thus, transportation plans must "conform" to air quality plans. Transportation conformity is demonstrated in a nonattainment or maintenance area when it can be shown, within the applicable guidelines and regulations, that planned transportation projects listed in a transportation program or plan will not cause or contribute to exceedances of the NAAQS. A finding of nonconformity would prevent the implementation of certain federally funded and/or regionally significant transportation projects.

### Coarse Particulate Matter (PM<sub>10</sub>)

Northern Ada County is designated as a maintenance area in attainment of the 24-hour PM<sub>10</sub> NAAQS. Appendix A shows the extent of the maintenance area boundaries. While exceedances of the 24-hour PM<sub>10</sub> NAAQS have occurred due to wind-blown dust events, no violations of the 24-hour PM<sub>10</sub> NAAQS have occurred since the area was designated as a maintenance area in attainment of the standard. Prior to March 12, 1999, Northern Ada County was designated as a nonattainment area for PM<sub>10</sub>. However, on that date, the U.S. Environmental Protection Agency (EPA) administrator signed a revocation of Northern Ada County's nonattainment designation based on changes made to the PM<sub>10</sub> NAAQS ([64FR12257](#)). This ruling was challenged in the Ninth District Circuit Court. On January 31, 2001, the U.S. Department of Justice approved a settlement agreement for the Idaho Clean Air Force et al. v. EPA et al. lawsuit. A major component of the settlement agreement required the Idaho Department of Environmental Quality (DEQ) to update Northern Ada County's PM<sub>10</sub> State Implementation Plan (SIP). In September 2003, the EPA approved the *Northern Ada County PM<sub>10</sub> SIP Maintenance Plan and Redesignation Request*. In March 2013, the *Northern Ada County PM<sub>10</sub> State Implementation Plan, Maintenance Plan: Ten-Year Update*<sup>4</sup> (PM<sub>10</sub> maintenance plan) was submitted to EPA. On May 17, 2013, EPA announced receipt of the "maintenance plan" and issued determination of adequacy of the motor vehicle emission budgets for transportation conformity purposes.

---

<sup>4</sup>[http://www.deq.idaho.gov/media/971222-ada\\_county\\_pm10\\_sip\\_0213.pdf](http://www.deq.idaho.gov/media/971222-ada_county_pm10_sip_0213.pdf)

Commonly, past exceedances of the 24-hour PM<sub>10</sub> NAAQS in Northern Ada County occurred during severe wintertime air stagnation events. These events, known as atmospheric inversions, are caused when cold, stagnant air is held close to the valley floor by warmer air aloft. During these events, particulates form in the atmosphere out of gaseous pollutants such as oxides of nitrogen (NO<sub>x</sub>) and volatile organic compounds (VOCs). Thus, both NO<sub>x</sub> and VOCs are considered precursors of PM<sub>10</sub>. As a result, the PM<sub>10</sub> maintenance plan contains approved PM<sub>10</sub>, NO<sub>x</sub>, and VOC motor vehicle emissions budgets.

### **Carbon Monoxide (CO)**

Northern Ada County is designated as an attainment area with an approved limited maintenance plan for the CO NAAQS. Northern Ada County has not experienced a violation of the CO NAAQS since 1987. DEQ submitted the *Limited Maintenance Plan and Request for Redesignation to Attainment for the Northern Ada County Carbon Monoxide Not-Classified Nonattainment Area* to EPA in December 2001. EPA approved the limited maintenance plan and subsequently redesignated the area in December 2002. The *Northern Ada County Air Quality Maintenance Area Second 10-Year Carbon Monoxide Limited Maintenance Plan*<sup>5</sup> (CO maintenance plan) was approved by EPA September 2012. Maintenance areas under a limited maintenance plan are not required to demonstrate their transportation programs or long-range transportation plans conform through a regional emissions analysis. Therefore, there are no applicable CO motor vehicle emissions budgets established for Northern Ada County.

### **Rules**

As described previously, the PM<sub>10</sub> maintenance plan established motor vehicle emissions budgets for PM<sub>10</sub>, NO<sub>x</sub>, and VOCs. Therefore, to satisfy transportation conformity requirements established by 40CFR93.118, budget tests must be performed for the FY2018-2022 Regional Transportation Improvement Program (TIP) and the Amended *Communities in Motion 2040* (CIM 2040) regional long-range transportation plan. Budget tests are satisfied when regional emissions estimates based on the transportation projects outlined in a TIP or transportation plan are less than or equal to "budgets" established by SIPs and/or air quality maintenance plans.

As noted above, EPA guidance related to "limited maintenance plans" eliminates this requirement with regard to CO for Northern Ada County's conformity demonstrations:

*...in areas with approved limited maintenance plans, Federal actions requiring conformity determinations under the transportation conformity rule could be considered to satisfy the budget test required in section 93.118, 93.119, and 93.120 of the rule.*<sup>6</sup>

Therefore, CO motor vehicle emissions budget tests are not federally required for Northern Ada County. However, COMPASS conducts a build/no build analysis per the CO maintenance plan of its programs and long-range plans in order to facilitate good air quality planning. If the results of this analysis show an unacceptable increase in CO emissions, DEQ may choose to require mitigation measures.

---

<sup>5</sup> <http://www.deq.idaho.gov/media/909866-ada-county-co-maintenance-plan-2011.pdf>

<sup>6</sup> Page 8 of the *Northern Ada County Air Quality Maintenance Area Second 10-Year Carbon Monoxide Limited Maintenance Plan* <http://www.deq.idaho.gov/media/909866-ada-county-co-maintenance-plan-2011.pdf>

## **Interagency Consultation**

Idaho Administrative Code (IDAPA 58.01.01.567) requires that agencies within nonattainment and maintenance areas establish Interagency Consultation Committees (ICCs) on transportation conformity. The Northern Ada County ICC is comprised of the following agencies:

- Ada County Highway District (ACHD)
- ACHD Commuteride
- City of Boise
- COMPASS as the MPO
- DEQ
- Idaho Transportation Department, District 3
- Valley Regional Transit
- Federal Highway Administration Idaho Division, ex-officio

The Northern Ada County ICC approved the assumptions and methodologies employed in the development of the regional emissions analyses in this demonstration on June 14, 2017. The approved assumptions and methodologies are listed in Appendix B. The roadway project list was also approved by the ICC on June 14, 2017. A complete listing of the ICC requirements can be found in Idaho Administrative Code (IDAPA 58.01.01.563-574).

## **Budget Test**

A budget test is a comparison of emissions estimates to an established limit (or budget) for motor vehicles. As per 40CFR93.118(b), budget tests must be performed:

*...each year for which the applicable ... implementation plan specifically establishes motor vehicle emissions budget(s), for the last year of the transportation plan's forecast period, and for any intermediate years as necessary so that the years for which consistency is demonstrated are no more than ten years apart...*

The PM<sub>10</sub> maintenance plan established motor vehicle emissions budgets for 2008, 2015, and 2023. Demographic data and transportation projects are grouped in five-year increments. Therefore, the conformity analysis also uses those increments, adhering to the applicable guidelines and regulations of no more than ten years between analysis years. Budget tests and CO build/no-build analysis are performed for:

- 2018 - Base year of the FY2018-2022 TIP
- 2022 - Last year of the FY2018-2022 TIP
- 2023 - SIP budget year; emissions estimated by interpolation
- 2030 - Intermediate analysis year
- 2040- Horizon year of the Amended CIM 2040

Projects for the scenarios are shown in Tables 1, 3, 6, and 8; the results are shown in Table 2, 4, 5, 7, and 9. The 2023 PM<sub>10</sub>, VOC, and NO<sub>x</sub> emissions shown in Table 5 were interpolated using 2022 and 2030 emissions as allowable per 40CFR93.118(d)(2):

*The regional emissions analysis may be performed for any years in the timeframe of the conformity determination (as described under §93.106(d)) provided they are not more than ten years apart and provided the analysis is performed for the attainment year (if it is in the timeframe of the transportation plan and conformity determination) and the last year of the timeframe of the conformity determination. Emissions in years for which consistency with motor vehicle emissions budgets must be demonstrated, as required in paragraph (b) of this section, may be determined by interpolating between the years for which the regional emissions analysis is performed.*

## Regionally Significant Projects

Regional emissions analyses, for the purposes of demonstrating transportation conformity of a TIP or long-range plan, must include all regionally significant and/or federally funded projects in the nonattainment or maintenance area.

40CFR93.101<sup>7</sup> defines a regionally significant project as:

*... a transportation project (other than an exempt project) that is on a facility which serves regional transportation needs (such as access to and from the area outside of the region, major activity centers in the region, major planned developments such as new retail malls, sports complexes, etc., or transportation terminals as well as most terminals themselves) and would normally be included in the modeling of a metropolitan area's transportation network, including at a minimum all principal arterial highways and all fixed guideway transit facilities that offer an alternative to regional highway travel.*

Idaho Administrative Code (IDAPA 58.01.01.566)<sup>8</sup> further defines a regionally significant project as:

*A transportation project, other than an exempt project, that is on a facility which serves regional transportation needs... and would normally be included in the modeling of a metropolitan area's transportation network, including, at a minimum:*

- a. All principal arterial highways;*
- b. All fixed guideway transit facilities that offer an alternative to regional highway travel; and*
- c. Any other facilities determined to be regionally significant through Section 570, interagency consultation.*

The ICC maintains discretionary authority in interpreting and applying these definitions to the area's transportation programs, plans, and projects. Definitions for regionally significant road projects and regionally significant transit projects, as developed by the ICC, are below. For the purposes of this conformity determination, all applicable roadway projects, despite their significance, were included in the travel demand model networks.

### Regionally Significant Roadway Project Definition

On January 30, 2002, the ICC developed the following definition of a "Regionally Significant" transportation project:

- A transportation project in Ada County, Idaho is designated "Regionally Significant" if:*
- (a) the project is for the improvement of either:*
    - (i) a principal arterial or higher functional classification; or*
    - (ii) a minor arterial which will have a twenty (20) year projected traffic volume of at least 45,000 vehicles a day after completion of the project; and*
  - (b) the project will add at least one new continuous vehicular lane which either:*
    - (i) extends from one intersecting principal or minor arterial to another intersecting principal or minor arterial; or*
    - (ii) in the case of an interstate, extends from the on ramp of one interstate interchange to a point beyond the off ramp of the next adjacent interstate interchange.*

<sup>7</sup> [Code of Federal Regulations Title 40: Protection of Environment](#)

<sup>8</sup> [Idaho Administrative Code Rules for the Control of Air Pollution in Idaho](#)

### Regionally Significant Transit Project Definition

On August 31, 2005, the ICC adopted the following definition of a "Regionally Significant" transit project:

*A transit project in Ada County, Idaho is designated "Regionally Significant" if the transit project:*

- (a) has the potential to change the vehicle demand of an existing roadway classified as a principal arterial or higher by 400 vehicles per hour, or 4,000 vehicles per weekday; and*
- (b) is a transit service or facility that provides services to (or connects) at a minimum:
  - (i) two counties and;*
  - (ii) three incorporated cities**

### Exempt Projects

Pursuant to 40CFR93.126 (Exempt Projects), certain projects listed in a TIP or long-range transportation plan may proceed even in the absence of a conformity finding/demonstration. Exempt projects include highway safety or mass transit projects, landscaping projects, roadway rehabilitation and repair projects, transportation enhancement projects, and transportation planning activities that do not lead directly to construction. However, the exempt projects listed in 40CFR93.126 are not considered exempt if the ICC concludes that they may have an adverse impact on air quality.

In addition, 40CFR93.127 (Projects Exempt from Regional Emissions Analyses) considers projects, such as intersection signalization, changes in alignment, bus terminals, and transit transfer points, exempt from regional emissions analyses. However, these projects must demonstrate project-level conformity. As with the types of exempt projects listed in 40CFR93.126, the projects listed in 40CFR93.127 may not be considered exempt if the ICC concludes they may have an adverse impact on air quality.

### **Transportation Control Measures**

As per 40CFR93.113(c), in order for a TIP or long-range transportation plan to be conforming, it cannot interfere with the implementation of any transportation control measures. There are no transportation control measures requiring implementation in either the PM<sub>10</sub> maintenance plan or the CO maintenance plan. Therefore, the TIP meets the requirements of 40CFR93.113(c).

## II. EMISSIONS ESTIMATION

### Emissions Analysis Assumptions and Tools

This air quality conformity demonstration is based upon average speed distributions for each roadway type by 16 speed "bins." The regional travel demand model's average daily estimates or forecasts for each roadway segment provide the necessary data for this input. Emissions factors are generated using the latest version of EPA's motor vehicle emissions model (Motor Vehicle Emission Simulator, or MOVES2014a). A regional emission analysis was conducted as described below.

#### **COMPASS' Travel Demand Model**

The COMPASS travel demand model provides estimates of average weekday and peak hour travel demand for each link of a given transportation network based on current and future growth assumptions. In addition to travel demand, the model produces weekday vehicle miles of travel forecasts, congested network speeds, and other data relevant to regional emissions analyses. The travel demand model is regularly maintained and updated to include all completed roadway projects. Future-year model networks include anticipated widening and new roadway projects, regardless of significance or exemption status. Transportation network components include interstates, principal arterials, minor arterials, collectors, and select local roads in Ada and Canyon Counties.

Calibration, validation, and updates to COMPASS' travel demand model were performed under the review of the Transportation Model Advisory Committee (TMAC). TMAC was a technical committee formed by the COMPASS Board of Directors. The committee was made up of local experts, technical staff from COMPASS member agencies, and local traffic engineers from both the public and private sectors. TMAC worked with COMPASS staff to calibrate and validate the regional travel demand model to reflect the actual travel patterns and behaviors in the Ada and Canyon Counties. A major update to the regional travel demand model was completed in January 2015. The committee was disbanded after this work was completed as part of a larger change in COMPASS committee structure; if needed, a workgroup can be established in the future to advise on modeling activities. To learn more about the travel demand model visit

<http://www.compassidaho.org/prodserv/traveldemand.htm>.

#### **Demographic Data**

The COMPASS Board of Directors approves the official population and employment forecast control totals for Ada and Canyon Counties. Between September 2011 and October 2012, COMPASS, its member agencies, stakeholders, and the general public participated in the development of a preferred growth scenario for the year 2040 – the *Communities in Motion 2040* Vision. This preferred growth scenario, used for the CIM 2040 plan, was based on approved population and employment forecasts and was adopted by the COMPASS Board in October 2012. To learn more about the process and growth allocations visit

[http://www.compassidaho.org/prodserv/cim2040\\_scenarioplanning.htm](http://www.compassidaho.org/prodserv/cim2040_scenarioplanning.htm).

In early 2017, COMPASS updated and reconciled the demographic forecasts to account for building permit activity and approved developments since the CIM 2040 Vision was approved in 2012. This is an annual process coordinated with land use agencies and the Demographic Advisory Workgroup.

The CIM 2040 Vision forecasts the demographic data in five-year increments (Figure 1). Demographic data for the analysis years of 2018 and 2022 were developed (interpolated) using the current estimates and/or the appropriate reconciled demographic forecast. For example, the 2018 demographics used the 2017 estimates and the reconciled 2020 forecasted demographics. The 2022 demographics used the reconciled 2020 and 2025 demographics.

**Figure 1: COMPASS Population Estimates<sup>9</sup> and Forecasts**

**Roadway Network Assumptions**

The projects used in the regional emissions analysis for the FY2018-2022 TIP and Amended CIM 2040 were derived from:

- COMPASS’ FY2018-2022 TIP
- ACHD’s FY2018-2022 Integrated Five-Year Work Plan
- FY2018-2022 Idaho Transportation Investment Program
- ACHD’s 2016 Capital Improvements Plan (CIP) (FY2016-2035)
- Amended CIM 2040, the regional long-range transportation plan for Ada and Canyon Counties

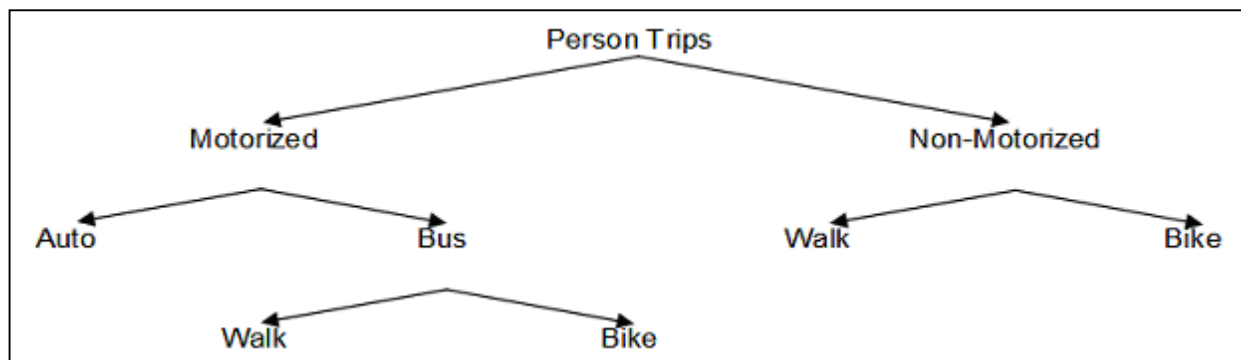

Roadway projects were placed into analysis (or budget) year networks based on information contained in the above sources. The anticipated project completion date is used to place the transportation project in the appropriate network year. Projects listed as “preliminary development” in the TIP were placed in the roadway network year based on information provided by the transportation agencies. Other future roadway projects listed on the funded list of both CIM 2040 and ACHD’s CIP were placed in a roadway network year based on information contained in ACHD’s CIP. For transparency, COMPASS includes all roadway projects, even those designated as “exempt,” in its conformity analysis. This is reflected in the projects listed in Tables 1, 3, 6, and 8. Roadway projects listed as unfunded in CIM 2040 **and** right-of-way only/unfunded in ACHD’s CIP were not included in the roadway networks. These “unfunded” projects cannot be considered funded or go to construction without an accompanying emissions analysis.

**Transit Service Assumptions**

Regional impacts from access to the area’s transit system were included in the emissions analysis. This was done within COMPASS’ travel demand model using a “mode choice” model. A “mode choice” model is the third step in a traditional four-step travel demand model, such as the one maintained by COMPASS. It takes estimates of “person trips” and predicts the mode of travel the trip will use.

<sup>9</sup> <http://www.compassidaho.org/documents/prodserv/demo/PopulationEstimateMethodology2016.pdf>

Figure 2 shows the modes available to the travel demand model for assignment. Transit trips are assigned to a transit network input into the travel demand model. Non-motorized trips are not assigned to a network.

**Figure 2: COMPASS Model Travel Modes**

Currently, no major system expansion is funded for the region’s transit system in either the FY2018-2022 TIP or Amended CIM 2040. Therefore, only the transit system as it exists today is included in the analysis through 2040. The current system includes:

- Eighteen all-day routes and two express routes with peak hour headways between 20-60 minutes in the Boise/Garden City service area.
- Five Nampa and Caldwell fixed routes with peak hour headways up to 60 minutes.
- Six inter-county routes (between Ada and Canyon Counties) with up to 30 minute headways during the morning/afternoon peak periods and 2-3 hour headways during off peak periods.
- ADA required paratransit service in both Ada and Canyon Counties.

Chapter 5 in CIM 2040<sup>10</sup> contains more information on the region’s current transit system. Specific information on the routes and schedules used to model the transit system can be found at Valley Regional Transit’s website at <http://www.valleyride.org/>.

Travel demand forecast models are used to calculate vehicle miles of travel (VMT). VMT is an estimate of the amount of vehicular travel in a given geographical area and is dependent upon land use (growth) and assumptions about the transportation system (programmed and funded projects). VMT and roadway speed are the outputs of the regional travel demand model necessary to run MOVES for emission estimates. Figure 3 shows the vehicle miles of travel for 2018, 2022, 2030, and 2040, which coincide with the analysis years for this conformity demonstration.

<sup>10</sup> <http://www.compassidaho.org/prodserv/cim2040.htm#Plan>

**Figure 3: Vehicle Miles of Travel Estimated by the Travel Demand Model**

**Emissions Modeling**

EPA’s new emissions model, MOVES, was used to estimate the air quality impacts associated with current and future roadway networks.

The MOVES model<sup>11</sup> uses local data inputs for climate, elevation, Northern Ada County’s vehicle emissions testing program, and travel demand model forecasted VMT and roadway speeds to develop emission factors for specified air pollutants. Appendix B summarizes the MOVES modeling assumptions approved by the ICC for use in this demonstration. These model settings and inputs were reviewed during the interagency consultation process. Both the PM<sub>10</sub> and CO maintenance plans were updated by DEQ’s Boise Regional Office. All of the methodologies, assumptions, processes, and results are documented in the updated maintenance plans. Both plans and associated appendices are available on DEQ’s website, as listed below:

PM<sub>10</sub> Maintenance Plan

As described on page 9, PM<sub>10</sub>, VOC, and NO<sub>x</sub> budget tests were performed under the four scenario years: 2018, 2022, 2030, and 2040. Results are shown in Table 2, 4, 7, and 9. Table 5 shows interpolated 2023 PM<sub>10</sub>, VOC, and NO<sub>x</sub> emissions and the 2023 established budget for all three pollutants.

## 2018 Baseline Scenario

The 2018 baseline scenario uses near-term population and employment estimates with the 2018 roadway network listed in Table 1. *(Note: The numbers in the "No." column are for reference only.)* Projects 1 through 4 are included for information purposes only. These projects were recently completed, or are currently under construction, with expected completion by the end of 2017.

<b>Table 1: Projects Included in the 2018 Network for the 2018 Baseline Scenario</b>						
No.	Project	Location	Description	Source <sup>1</sup>	Key # <sup>2</sup> (ITIP, IFYWP, CIP)	Subject to Regional Emissions Analysis
1.	State Hwy 55 (Eagle Rd.)	Northbound Franklin Rd. to Fairview Ave.	Widen northbound from 2 lanes to 3 lanes	ITIP	13349	Yes – principal arterial
2.	Franklin Rd.	Black Cat Rd. to Ten Mile Rd.	Widen roadway from 2 lanes to 5 lanes	ITIP, IFYWP, 2016 CIP	12368, RC0152, RD2016-57	Yes – principal arterial and federal funds
3.	Ustick Rd.	Linder Rd. to Meridian Rd.	Widen roadway from 2 lanes to 5 lanes	IFYWP, 2016 CIP	RD202-35, RD2016- 126	Yes – principal arterial
4.	Ustick Rd.	Meridian Rd. to Locust Grove Rd.	Widen roadway from 2 lanes to 5 lanes	IFYWP, 2016 CIP	RD202-37, RD2016- 127	Yes – principal arterial
5.	Cloverdale Rd.	Fairview Ave. to Ustick Rd.	Widen roadway from 2 lanes to 5 lanes	IFYWP, 2016 CIP	RC0087, RD2016-25	No – minor arterial
6.	Emerald St. / Americana Ave. lane reconfiguration	Orchard St. to Latah St.	Reconfigure Emerald St. from 4 lanes to 2 lanes. Reconfigure southbound travel on Americana Ave. from Latah St. to Ann Morrison Park entrance from 2 lanes to 1 lane	IFYWP	CM212-08	No – minor arterial
7.	Lake Hazel Rd.	Cole Rd. to Orchard Ext. W	Construct a new 2 lane road between Cole Rd. and Orchard St. extension	IFYWP, 2016 CIP, CIM 2040	RD216-02, RD2016-70	Yes – principal arterial
8.	Orchard Ext. W. and Orchard Ext.	Lake Hazel Ext. to Gowen Rd.	Construct a new 2 lane road between Lake Hazel Rd. extension and Gowen Rd.	IFYWP, 2016 CIP, CIM 2040	RD216-03, RD2016- 103, RD2016- 104	Yes – principal arterial

<sup>1</sup> ITIP = Idaho Transportation Investment Program (statewide equivalent of the regional TIP); IFYWP = ACHD's Integrated Five-Year Work Plan; CIP = ACHD's Capital Improvements Plan

<sup>2</sup> Key #: Numeric identification numbers refer to projects in the ITIP. Alphanumeric identification numbers refer to projects in ACHD's IFYWP or CIP.

Table 2 shows estimated motor vehicle emissions for PM<sub>10</sub>, VOC, and NO<sub>x</sub> from the 2018 baseline scenario.

<b>Table 2: 2018 Estimated Emissions, Tons per Day</b>						
<b>2018</b>	<b>PM<sub>10</sub></b>				<b>VOC</b>	<b>NO<sub>x</sub></b>
	Unpaved Road Dust Emissions	Paved Road Dust Emissions	Tailpipe, Tire, and Brakewear Emissions	Total PM <sub>10</sub> Emitted		
Estimated Emissions	2.65	23.13	0.78	26.6	5.57	9.93
<b>Budget</b>	<b><i>n/a</i></b>	<b><i>n/a</i></b>	<b><i>n/a</i></b>	<b>42.9</b>	<b>12.6</b>	<b>29.5</b>

## 2022 Scenario

The 2022 scenario uses 2022 population and employment forecasts with the 2022 roadway network. The 2022 roadway network includes the projects listed in Tables 1 and 3. (Note: The numbers in the "No." column are for reference only.)

<b>Table 3: Projects Added to the 2018 Network for the 2022 Scenario</b>						
No.	Project	Location	Description	Source <sup>1</sup>	Key # <sup>2</sup> (ITIP, IFYWP, CIP)	Subject to Regional Emissions Analysis
9.	Cloverdale Rd.	Ustick Rd. to McMillan Rd.	Widen roadway from 2 lanes to 5 lanes	IFYWP, 2016 CIP	RC0092, RD2016-26	No – minor arterial
10.	Cloverdale Rd.	McMillan Rd. to US Hwy 20/26 (Chinden Blvd.)	Widen roadway from 3 lanes to 5 lanes	IFYWP, 2016 CIP	RD207-13, RD2016-27	No – minor arterial
11.	Cole Rd.	Overland Rd. to Franklin Rd.	Widen roadway from 3 lanes to 5 lanes	IFYWP, 2016 CIP	IN203-14, RD207-16, RD2016-29	Yes – principal arterial
12.	Cole Rd.	McGlochlin St. to Victory Rd. (with intersection project)	Widen roadway from 2 lanes to 5 lanes	IFYWP, 2016 CIP	IN205-97, RD2016-28	Yes – principal arterial
13.	State Hwy 55 (Eagle Rd.)	Southbound River Valley Rd. to Franklin Rd.	Widen southbound from 2 lanes to 3 lanes	ITIP	13349	Yes – principal arterial
14.	Eagle Rd.	Amity Rd. to Victory Rd.	Widen roadway from 2 lanes to 5 lanes	IFYWP, 2016 CIP, CIM 2040	RD207-33, RD2016-32	Yes – principal arterial
15.	Linder Rd.	Franklin Rd. to Pine Ave.	Widen roadway from 2 lanes to 5 lanes	IFYWP, draft CIP, CIM 2040	RD213-16, RD2016-76	Yes – principal arterial
16.	Linder Rd.	Ustick Rd. to McMillan Rd.	Widen roadway from 2 lanes to 5 lanes	2016 CIP, CIM 2040	RD2016-78	Yes – principal arterial
17.	Linder Rd.	McMillan Rd. to US Hwy 20/26 (Chinden Blvd.)	Widen roadway from 2 lanes to 5 lanes	2016 CIP, CIM 2040	RD2016-79	Yes – principal arterial
18.	Maple Grove Rd.	Victory Rd. to Overland Rd.	Widen roadway from 2 lanes to 5 lanes	IFYWP, 2016 CIP	RD207-22, RD2016-89	No –minor arterial
19.	Meridian Rd.	Cherry/Fairview Ave. to Ustick Rd.	Widen roadway from 3 lanes to 5 lanes	IFYWP, 2016 CIP	RD207-23, RD2016-100	No –minor arterial
20.	Pine Ave.	Meridian Rd. to Locust Grove Rd.	Widen roadway from 2 lanes to 3 lanes at the east end where needed	IFYWP, 2016 CIP	RD208-01, RD2016-113	No –minor arterial
21.	State Hwy 21	Technology Way to Surprise Way	Widen roadway from 2 lanes to 5 lanes	CIM 2040, draft CIM 2040 Amendment #3	ORN 20442	Yes – principal arterial
22.	US Hwy 20/26	Linder Rd. to Meridian Rd.	Widen roadway from 2 lanes to 5 lanes	CIM 2040, draft CIM 2040 Amendment #3	ORN 20440	Yes – principal arterial
23.	US Hwy 20/26	Meridian Rd. to Locust Grove Rd.	Widen roadway from 2 lanes to 5 lanes	CIM 2040, draft CIM 2040 Amendment #3	ORN 20440	Yes – principal arterial
24.	US Hwy 20/26	Locust Grove Rd. to State Hwy 55 (Eagle Rd.)	Widen roadway from 2 lanes to 5 lanes	CIM 2040	19944	Yes – principal arterial

<sup>1</sup> ITIP = Idaho Transportation Investment Program (statewide equivalent of the regional TIP); IFYWP = ACHD's Integrated Five-Year Work Plan; CIP = ACHD's Capital Improvements Plan

<sup>2</sup> Key #: Numeric identification numbers and alphanumeric identification numbers beginning with "ORN" refer to projects in the ITIP. All other alphanumeric identification numbers refer to projects in ACHD's IFYWP or CIP.

Table 4 shows estimated motor vehicle emissions for PM<sub>10</sub>, VOC, and NO<sub>x</sub> from the 2022 scenario.

<b>Table 4: 2022 Estimated Emissions, Tons per Day</b>						
<b>2022</b>	<b>PM<sub>10</sub></b>				<b>VOC</b>	<b>NO<sub>x</sub></b>
	Unpaved Road Dust Emissions	Paved Road Dust Emissions	Tailpipe, Tire, and Brakewear	Total PM <sub>10</sub> Emitted

## Carbon Monoxide Emissions

To satisfy DEQ requirements, a regional CO emissions analysis was conducted using EPA’s MOVES model and the COMPASS travel demand model. Specific information on the models and their inputs can be found in previous sections of this document. Build emissions were estimated and compared to no build emissions estimates. A build scenario estimates emissions for a given analysis year assuming the programmed/planned roadway/transit projects have been constructed. Conversely, a no build scenario estimates emissions for a given analysis year using the transportation system as it exists in the base year (i.e., before programmed or planned projects are built). This comparison provides the CO emissions impacts to the region from the planned transportation system.

### Build/No Build Scenarios

The build scenarios use transportation networks and demographic assumptions specific to the analysis year. These are the same scenarios used to estimate PM<sub>10</sub>, NO<sub>x</sub>, and VOC emissions, above. Table 1, 3, 6, and 8 provide more detailed information on the roadway projects used to develop the build scenario networks.

The no build scenarios use the 2018 (baseline) transportation network with the demographic assumptions specific to the analysis year. Table 1 provides more detailed information on the roadway projects included in the 2018 baseline transportation network.

Table 10 shows the build and no build CO emissions estimates for 2018, 2022, 2030, and 2040.

<b>Table 10: Build/No Build Scenario CO Emissions</b>				
	Year			
	2018	2022	2030	2040
Build CO Emissions (Ton/day)	57.9	50.5	37.4	30.3
No Build CO Emissions (Ton/day)	n/a	50.6	37.4	30.5

### III. CONCLUSIONS

#### PM<sub>10</sub> Budget Test

The results of the PM<sub>10</sub> budget test for the FY2018-2022 TIP and Amended CIM 2040 show that the emissions impacts associated with the planned improvements to the Northern Ada County transportation system (projects listed in Table 1, 3, 6, and 8) will not exceed the PM<sub>10</sub> emissions budgets established by the PM<sub>10</sub> maintenance plan (Figure 4).

**Figure 4: PM<sub>10</sub> Budget Test Results**

## VOC Budget Test

The results of the VOC budget test for the FY2018-2022 TIP and Amended CIM 2040 show that the emissions impacts associated with the planned improvements to the Northern Ada County transportation system (projects listed in Tables 1, 3, 6, and 8) will not exceed the VOC emissions budgets established by the PM<sub>10</sub> maintenance plan (Figure 5).

**Figure 5: VOC Budget Test Results**

## NO<sub>x</sub> Budget Test

The results of the NO<sub>x</sub> budget test for the FY2018-2022 TIP and Amended CIM 2040 show that the emissions impacts associated with the planned improvements to the Northern Ada County transportation system (projects listed in Tables 1, 3, 6, and 8) will not exceed the NO<sub>x</sub> emissions budgets established by the PM<sub>10</sub> maintenance plan (Figure 6).

**Figure 6: NO<sub>x</sub> Budget Test Results**

## CO Planning Analyses

### Build/No Build Emissions Comparison:

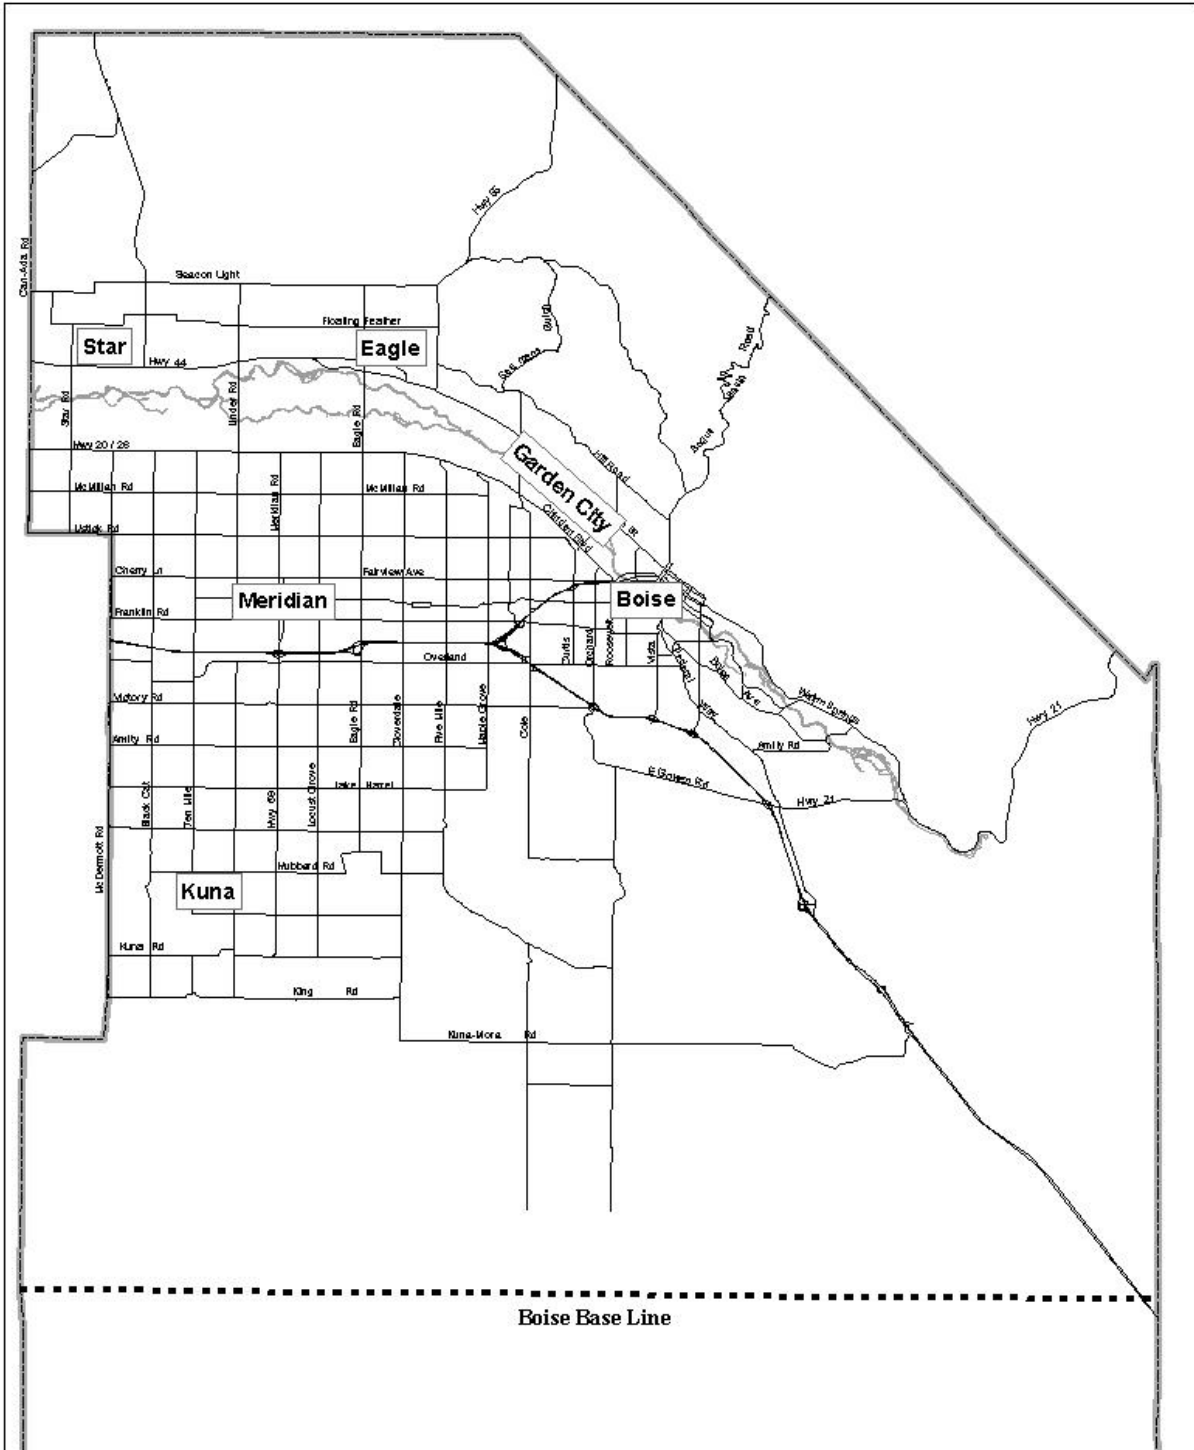

Figure 7 shows the comparison between the build and no build emissions scenarios for each analysis year. Again, the purpose of these comparisons is not to demonstrate conformity with the CO limited maintenance plan, but rather to facilitate good air quality planning in Northern Ada County.

**Figure 7: CO Build/No Build Comparison**

# **APPENDICES**

# Appendix A: Northern Ada County PM<sub>10</sub> and CO Maintenance Area

## **Legal Description for Northern Ada County PM<sub>10</sub> and CO Maintenance Area**

The legal description of the area boundaries is as follows:

- Beginning at a point in the center of the channel of the Boise River where the section line between Sections 15 and 16 of Township 3 North, Range 4 East, crosses the Boise River.

### Northern Boundary

- Thence down the center of the channel of the Boise River to a point opposite the mouth of Mores Creek.
- Thence in a straight-line going 44 degrees north and 38 minutes west until said line intersects the north line of Township 5 North in Range 1 East.
- Thence west to the northwest corner of Section 6, Township 5 North, Range 1 West.

### Western Boundary

- Thence south to the northwest corner of Section 6, Township 3 North, Range 1 West.
- Thence east to the northeast corner of Section 5, Township 3 North, Range 1 West.
- Thence south to the southeast corner of Section 32, Township 2 North, Range 1 West.
- Thence west to the northwest corner of Section 6, Township 1 North, Range 1 West.
- Thence south to the southwest corner of Section 31, Township 1 North, Range 1 West.

### Southern Boundary

- Thence east to the southeast corner of Section 33, Township 1 North, Range 4 East.

### Eastern Boundary

- Thence north to the point of beginning.

## Appendix B: Approved Regional Emission Assumptions

### Source type population and fleet age distribution:

DEQ decoded individual Idaho Division of Motor Vehicles registration records of vehicles registered in the Treasure Valley using the Data One, Inc. and CVINA vehicle identification number (VIN) decoding system. The decoded VINs provide information regarding the vehicle make, model, type, age, and fuel types. This information was then used to develop source-related MOVES input.

### Inspection Maintenance (IM) Program – June 1, 2010 - future

#### **Ada County:**

- 1) Two speed test (idle and 2500 RPM) for pre 1996 vehicles only.
- 2) Exhaust OBD check for 1996 and newer vehicles.
- 3) Evaporative system OBD check for 1996 and newer vehicles.
- 4) Compliance factor – This factor is calculated annually from the previous year’s IM program statistics.
- 5) Four-year grace period for new vehicles
- 6) Biennial testing – effective January 1, 2010.

#### **Canyon County:**

- 1) Two speed test (idle and 2500 RPM) for pre 1996 vehicles only.
- 2) Evaporative gas cap check for 1996 and newer vehicles.
- 3) Exhaust OBD check for 1996 and newer vehicles.
- 4) Evaporative system OBD check for 1996 and newer vehicles.
- 5) Compliance factor – This factor is calculated annually from the previous year’s IM program statistics.
- 6) Five-year grace period for new vehicles
- 7) Biennial testing – effective January 1, 2010.

### Meteorology

The meteorology input compiles the average hourly temperature and relative humidity data for each county. Base- and future-year inventories were modeled using average hourly temperature and relative humidity data by county for each month from a representative weather station for each county. Ada County is represented by the National Weather Service station at the Boise Air Terminal and Canyon County is represented by the data set from the Caldwell Industrial Airport.

### Fuel-Related Inputs

**Alternative Vehicle Fuels and Technology (AVFT):** Ada and Canyon Counties were modeled using a custom AVFT input file derived from VIN-decoded registration data, the Idaho Department of Education school bus database, and telephone surveys of local garbage collection and public transportation providers.

**Fuel Supply, and Fuel Formulation:** National default fuel supply inputs were used for all source types.

**Fuel Usage Fractions:** Assume that all E-85 capable vehicles are using conventional (E10) gasoline

### Average Speed Distribution

The average speed distribution allocates the different source types (vehicles) for each roadway type to 16 speed bins ranging from 0 to >75 miles per hour. *Average* speed distributions were developed from the regional travel demand model average daily estimates or forecasts for each roadway segment and hourly traffic count statistics developed from detailed automatic traffic recorder (ATR) traffic count data provided by Idaho Transportation Department (ITD).

The hourly ATR-based traffic count profiles for each roadway type were used to estimate hourly volume on each segment and the modified Bureau of Public Roadways volume/capacity curve was used to develop the average speed distribution database for each hour.

$$\text{Hourly Vehicle Speed} = \text{Free Flow Speed} * \left( 1 + A * \left( \frac{\text{Volume}}{\text{Capacity}} \right)^B \right)$$

Where A and B are local coefficients used in the regional travel demand model as provided by COMPASS. Base- and future-year average speed distributions were developed for all four MOVES road types using travel demand model base and future-year outputs developed by COMPASS for the Treasure Valley and detailed ATR data provided by ITD.
